October 2025

Statement Regarding Suitability of Plastic Trays for Repeated Use

Item no: 1509014203

We hereby confirm that the above-mentioned plastic trays have been tested to evaluate their suitability for repeated use under the following protocols:

1. Dishwasher Resistance Testing

Testing using an adapted method from NF EN 12875-1:2005-11 was conducted to evaluate trays' mechanical and visual durability after repeated dishwashing cycles:

- The trays withstood 30 dishwasher cycles while maintaining functional integrity.
- No significant deformation, loss of structural strength, or aesthetic degradation was observed.
- The trays remained suitable for continued use after testing.

2. Migration Testing (Repeated Use)

Raw material was tested in accordance with Regulation (EU) No 10/2011, Annex V, Part 3.3.2, which outlines the requirements for repeated use food contact materials.
During the tests:

- The materials complied with applicable overall and specific migration limits.
- Testing simulated repeated use conditions to ensure continued safety in food contact applications.

Based on the above evaluations, we can confirm that the referenced trays are suitable for repeated use, including cleaning in dishwashers and safe continued contact with food under the defined conditions.

Important Note

For further guidance on the use of plastic trays in repeated applications, including dishwashing and food safety, please refer to applicable EU regulations. In addition, we recommend referring to official definition provided in Packaging and Packaging Waste Regulation 2025/40 regarding the reusable packaging and mandatory requirements set by it.
